

THE SWIVEL FOR LARGE DELIVERY SYSTEMS

(HUSKY MODEL 5266 SWIVEL SHOWN)

Husky Corporation is pleased to announce our new line of high flow hose swivels for large delivery systems. These new swivels are designed for use with our Model 1690 High Volume nozzle or other Bulk Delivery systems making it easier to manipulate the long, heavy hoses needed to deliver product.

•Increase Hose Life

Relieves kinking and twisting of the hose. Hose will last longer saving you money on replacements.

•Swivels Easier

Includes the same stainless steel ball bearing design as our 4605 Inverted and 4860 1" High Flow Swivels. Unique to Husky products, this design provides easier joint movement during high pressure applications.

•Lasts Longer

Stainless steel bearings tested over 100,000 cycles with no appreciable wear or loss of function.

•Easier to Deliver Product

It's a fact that a swivel installed on a nozzle makes for easier handling. With the heavy weight of long, bulk delivery hoses it becomes easier to angle your nozzle into fill openings.

•Available in the following sizes:

Model 5235 – 1¼" F X 1¼" M

Model 5240 – 1¼" F X 1½" M

Model 5265 – 1½" F X 1¼" M

Model 5266 – 1½" F X 1½" M
